

JANE SMITH

Senior Backend Engineer | Distributed Systems · AI Agents · Cloud Infrastructure

Remote, US · jane.smith@example.com · linkedin.com/in/janesmith

SUMMARY

Senior backend engineer with 8+ years building scalable distributed systems. Built real-time data pipelines processing 50k+ events/sec at TechCorp, led platform migration serving 10M+ users at StartupCo. Currently building open-source infrastructure for AI agent orchestration. I ship fast and iterate based on data.

EXPERIENCE

Founder & Engineer — MyStartup

Jan 2026 — Present

Open Source Infrastructure

- Built a high-performance data collector processing real-time WebSocket streams into columnar storage with 60+ computed metrics
- Created CLI tool for orchestrating multiple AI coding agents in parallel with dependency resolution
- Comprehensive testing: 70+ tests including E2E suite with mock server and integration tests

stack Rust, Go, Tokio, WebSocket, Parquet

Senior Backend Engineer & Team Lead — TechCorp

Mar 2024 — Dec 2025

Infrastructure Platform · 500+ Microservices

- Led 6-person team shipping two parallel infrastructure products on schedule
- Architected multi-tenant platform with transaction processing and settlement flows for enterprise clients
- Designed event-driven data pipelines improving system throughput under high-availability requirements

stack Go, PostgreSQL, Redis, Kafka, ClickHouse, gRPC, Kubernetes

Senior Backend Engineer — BigPlatform

Jun 2022 — Feb 2024

Core Services · 50M+ MAU · Top-10 in Category

- Owned core service handling thousands of RPS: payment flows, hold/commit patterns, and refund logic
- Implemented idempotency layer guaranteeing consistency under concurrent financial transactions
- Contributed to year-long service decomposition: mapped architecture, executed zero-downtime migration via blue-green deployments

stack Go, PostgreSQL, Redis, Kafka, gRPC, Kubernetes, Grafana

Backend Engineer — FinTechStartup

Jan 2021 — May 2022

Trading Platform · High Volume

- Integrated blockchain nodes for deposits, withdrawals, and on-chain confirmation tracking
- Built analytics integration for user attribution and campaign measurement

stack Kotlin, PostgreSQL, Redis, NATS, Docker, AWS

Backend Engineer — StreamingCo

Sep 2017 — Dec 2020

Streaming Platform · Millions of Users · 10,000+ RPS

- Built high-load Java/Spring microservices powering content API: catalog, search, recommendations under strict latency SLAs
- Led mobile downloads feature team, designed backend architecture for offline content consumption

stack Java, Spring, PostgreSQL, MySQL, MongoDB, Redis, Prometheus, Grafana

SKILLS

Core : Go, Rust, AI Agents, Distributed Systems, Microservices, Kafka, PostgreSQL, Kubernetes, System Design

Also : gRPC, REST APIs, Redis, Docker, AWS, Python, WebSocket, CI/CD, Prometheus, Grafana, Java, Kotlin, GraphQL, Event-Driven Architecture

EDUCATION

State University — Bachelor's & Master's in Computer Science

2010 — 2016
